DISSERTATION ABSTRACT

Hegel's Theory of Institutions: A Study of Sittlichkeit

Hegel's institutionalization of ethical life (*Sittlichkeit*) across the spheres of the family, civil society, and the state is regarded as among his most important contributions to philosophy. In this study, I show that Hegel understands institutions to be rational social forms. Institutions, such as marriage, the corporation, and sovereignty, are concrete forms that order social life according to its immanent telos, the realization of human freedom.

For Hegel, I argue, institutions must be understood ontologically (Chapter 3) and normatively (Chapter 4). In doing so, he unifies the two institutional paradigms that precede him: the French institutional tradition, exemplified by Montesquieu and Rousseau, and the German one, represented by Gustav Hugo and Kant (Chapters 1 and 2).

Ontologically, institutions are, for Hegel, meso-level social structures that combine a mode of being with a social function. For example, marriage is a social relation that functions to spiritually unite two spouses; the corporation is an association that functions to establish internal order and mutual respect among its members. Against the views of contemporary social ontologists, such as John Searle and Vincent Descombes, these forms have an existence that is ontologically objective,

similar to other social phenomena like economic recessions and racism, because their existence does not depend on people's attitudes about the institution itself.

Normatively, institutions are both transcendental conditions of human sociality and teleological conditions of human freedom. Challenging the prevailing readings of normativity in Hegel, I argue that Hegel distinguishes between two kinds of institutional critique. The first is scientific critique, which has a limited scope and derives from the concept of the institution in question. The second is political critique, which is wider-sweeping and derives from one's membership in an ethical community, but is always open to contestation by others, and so cannot achieve certainty. By distinguishing between these two forms of institutional critique, Hegel limits science to make room for politics.

Hegel's institutional theory should be compelling to us today, I conclude, because it accounts for the nature, necessity, and objectivity of institutions in human life and provides a normative foundation for social critique. Appreciating Hegel's theory will aid us in rethinking institutions and inspire new directions in social research.
